Supplier Proposal / RFP Response

Asterion Cloudworks | Fictional proposal for a configurable supplier-evaluation platform

Procurement context

The buyer seeks a configurable application to ingest competing supplier proposals, evaluate them against editable criteria, retain evidence, calculate deterministic peer benchmarks, and publish an explainable leaderboard. The solution must support different procurement categories through configurable criteria rather than category-specific scoring code. All suppliers are responding to this same sample requirement.

1. Executive summary and understanding

Asterion proposes a modular supplier-evaluation platform with strong identity controls, auditable scoring and integration options. Its approach is well documented, but the premium commercial offer and a relatively cautious rollout schedule are material trade-offs.

2. Proposed solution and delivery approach

A modular web application with a browser UI, REST API, relational data store and replaceable language-model provider adapters. The proposal includes configurable criteria, document ingestion, evidence-linked scorecards, peer benchmarking and versioned exports. The initial release assumes PDF text extraction; OCR is a separately priced option.

3. Timeline, team and milestones

Indicative delivery plan:

Milestone	Duration
Discovery and workflow mapping	2 weeks
Architecture and security design	3 weeks
Core platform and integrations	5 weeks
UAT, remediation and training	3 weeks
Go-live and hypercare	1 week

Proposed team

Delivery lead: accountable for scope and acceptance; solution architect: design and integrations; two application engineers: implementation; QA analyst: test planning and defect verification; enablement lead: training and handover. Named individuals and CVs are not supplied in this fictional proposal unless stated elsewhere.

4. Commercial proposal and assumptions

Cost component	Amount (INR)
Discovery and design	■8,00,000
Platform implementation	■28,00,000
Security review	■5,00,000
Year-one support	■6,00,000
Total first-year estimate	■47,00,000

Commercial assumptions: amounts are fictional planning estimates in Indian rupees, exclusive of applicable taxes unless expressly included. Final price depends on scope confirmation, data volumes, hosting choice, integrations and acceptance criteria. The buyer should validate whether optional items and recurring cloud costs are included.

5. Security, compliance and risk controls

Proposes SSO via OIDC, role-based access, encryption in transit and at rest, configurable retention, audit events and dependency scanning. It provides a control mapping and sample incident runbook. Independent penetration-test evidence is promised before go-live but not attached to this proposal.

6. Support, experience and references

Support model: Business-hours support with a 30-minute acknowledgement target for priority-one incidents, monthly service review and named delivery lead. 24x7 coverage is available at additional cost.

Relevant experience: Reports five comparable enterprise workflow deployments over four years. Two anonymized case summaries and reference contacts available after mutual NDA; no independently verifiable references are included in this

submission.

Evidence quality and limitations: Detailed architecture diagrams are described in text; control mapping and milestone acceptance criteria are included. Pricing assumptions and exclusions are explicit.

Key risks / open points: Premium price; 14-week estimated schedule; OCR and 24x7 support are excluded from base price; penetration-test report is not attached.

7. Clarifications requested

Before contract signature, the buyer should confirm data retention, hosting and data residency, user roles, integration endpoints, document volume, accessibility, service levels, tax treatment, acceptance criteria and ownership of custom code. Any item not explicitly committed above remains subject to clarification.

This document is synthetic test material created for an educational software project. Supplier names, prices, experience claims, timelines and references are fictional and must not be treated as real vendor claims.
