Supplier Proposal / RFP Response

BluePeak Digital Labs | Fictional proposal for a configurable supplier-evaluation platform

Procurement context

The buyer seeks a configurable application to ingest competing supplier proposals, evaluate them against editable criteria, retain evidence, calculate deterministic peer benchmarks, and publish an explainable leaderboard. The solution must support different procurement categories through configurable criteria rather than category-specific scoring code. All suppliers are responding to this same sample requirement.

1. Executive summary and understanding

BluePeak offers a lean implementation at the lowest quoted cost and a rapid delivery target. The proposal is commercially attractive, but the security section is brief, several delivery assumptions are unverified, and support commitments need clarification.

2. Proposed solution and delivery approach

A lightweight web application with PDF upload, configurable score weights, LLM-generated scoring notes and a supplier ranking dashboard. The team proposes a single deployable service and a managed relational database. Details for extensibility, access controls and large-document handling are limited.

3. Timeline, team and milestones

Indicative delivery plan:

Milestone	Duration
Kickoff and setup	1 week
Prototype and core scoring	3 weeks
UI and database	2 weeks
Customer testing and launch	1 week

Proposed team

Delivery lead: accountable for scope and acceptance; solution architect: design and integrations; two application engineers: implementation; QA analyst: test planning and defect verification; enablement lead: training and handover. Named individuals and CVs are not supplied in this fictional proposal unless stated elsewhere.

4. Commercial proposal and assumptions

Cost component	Amount (INR)
Configuration and build	■9,50,000
Cloud setup	■1,00,000
Training	■50,000
Total first-year estimate	■11,00,000

Commercial assumptions: amounts are fictional planning estimates in Indian rupees, exclusive of applicable taxes unless expressly included. Final price depends on scope confirmation, data volumes, hosting choice, integrations and acceptance criteria. The buyer should validate whether optional items and recurring cloud costs are included.

5. Security, compliance and risk controls

Mentions HTTPS, password-protected access and regular backups. It does not specify encryption at rest, formal access-control roles, audit-log retention, data residency, incident response timings or independent security testing. Compliance certifications are not stated.

6. Support, experience and references

Support model: Offers email support for 60 days after launch. No formal severity matrix, service-level agreement, escalation path or post-warranty annual price is supplied.

Relevant experience: The proposal describes two small internal workflow projects but provides no named customer references or measurable outcomes. Team CVs are not attached.

Evidence quality and limitations: Includes a one-page feature list and a high-level schedule. Cost exclusions, technical acceptance criteria and measurable service targets are incomplete.

Key risks / open points: Lowest price may exclude production hardening; security controls and support commitments are underspecified; seven-week timeline depends on rapid customer approvals; references absent.

7. Clarifications requested

Before contract signature, the buyer should confirm data retention, hosting and data residency, user roles, integration endpoints, document volume, accessibility, service levels, tax treatment, acceptance criteria and ownership of custom code. Any item not explicitly committed above remains subject to clarification.

This document is synthetic test material created for an educational software project. Supplier names, prices, experience claims, timelines and references are fictional and must not be treated as real vendor claims.
