Supplier Proposal / RFP Response

Driftwood Enterprise Services | Fictional proposal for a configurable supplier-evaluation platform

Procurement context

The buyer seeks a configurable application to ingest competing supplier proposals, evaluate them against editable criteria, retain evidence, calculate deterministic peer benchmarks, and publish an explainable leaderboard. The solution must support different procurement categories through configurable criteria rather than category-specific scoring code. All suppliers are responding to this same sample requirement.

1. Executive summary and understanding

Driftwood emphasizes extensive delivery experience and strong customer references. The offer is competitively mid-priced, but the technical integration approach is high level, and the schedule lacks sufficient detail around dependencies and acceptance criteria.

2. Proposed solution and delivery approach

A configurable workflow portal with document intake, scoring templates, reviewer comments, dashboards and exports. Integration with identity and procurement systems is described as feasible, but interfaces, data mapping, error handling and ownership are left for a later discovery phase.

3. Timeline, team and milestones

Indicative delivery plan:

Milestone	Duration
Initiation	2 weeks
Configuration	4 weeks
Integration and data migration	TBD after discovery
User testing	2 weeks
Go-live	Target week 10, subject to integration scope

Proposed team

Delivery lead: accountable for scope and acceptance; solution architect: design and integrations; two application engineers: implementation; QA analyst: test planning and defect verification; enablement lead: training and handover. Named individuals and CVs are not supplied in this fictional proposal unless stated elsewhere.

4. Commercial proposal and assumptions

Cost component	Amount (INR)
Discovery and configuration	₹5,00,000
Platform setup	₹16,00,000
Integration allowance	₹4,00,000
Year-one support	₹4,50,000
Total indicative first-year estimate	₹29,50,000

Commercial assumptions: amounts are fictional planning estimates in Indian rupees, exclusive of applicable taxes unless expressly included. Final price depends on scope confirmation, data volumes, hosting choice, integrations and acceptance criteria. The buyer should validate whether optional items and recurring cloud costs are included.

5. Security, compliance and risk controls

Describes standard enterprise controls including SSO, role-based access, backups and audit logging. It references a corporate security policy but does not provide a control-by-control mapping, certification evidence or retention defaults.

6. Support, experience and references

Support model: Offers 8x5 support, quarterly service reviews, named account management and optional extended-hours coverage. Severity response times are mentioned in a separate service schedule that was not included with this proposal.

Relevant experience: Reports eight enterprise deployments across document management and procurement workflows over six years. Three customer references are stated to be available with consent; the proposal includes two anonymized

summaries but limited quantitative outcome data.

Evidence quality and limitations: Experience narrative and case summaries are comparatively strong. Integration, security assurance and service-level evidence is incomplete or deferred.

Key risks / open points: Integration scope and timeline remain uncertain; some service commitments are in a missing attachment; indicative integration allowance may change after discovery.

7. Clarifications requested

Before contract signature, the buyer should confirm data retention, hosting and data residency, user roles, integration endpoints, document volume, accessibility, service levels, tax treatment, acceptance criteria and ownership of custom code. Any item not explicitly committed above remains subject to clarification.

This document is synthetic test material created for an educational software project. Supplier names, prices, experience claims, timelines and references are fictional and must not be treated as real vendor claims.
