Supplier Proposal / RFP Response

Fjordline Technology Cooperative | Fictional proposal for a configurable supplier-evaluation platform

Procurement context

The buyer seeks a configurable application to ingest competing supplier proposals, evaluate them against editable criteria, retain evidence, calculate deterministic peer benchmarks, and publish an explainable leaderboard. The solution must support different procurement categories through configurable criteria rather than category-specific scoring code. All suppliers are responding to this same sample requirement.

1. Executive summary and understanding

Fjordline proposes a modular and reasonably priced platform with a sensible separation between evaluation and deterministic ranking. The proposal includes a useful pilot concept, but several costs are estimates, the support model is incomplete, and some security assertions lack supporting artifacts.

2. Proposed solution and delivery approach

A Python-based application with a browser interface, relational persistence, configurable evaluation criteria, provider adapters and JSON exports. The team proposes a pilot using a small proposal set before adding integrations. Capacity assumptions and performance targets are not fully specified.

3. Timeline, team and milestones

Indicative delivery plan:

Milestone	Duration
Discovery and prototype	2 weeks
Core implementation	5 weeks
Pilot and fixes	2 weeks
Launch	1 week

Proposed team

Delivery lead: accountable for scope and acceptance; solution architect: design and integrations; two application engineers: implementation; QA analyst: test planning and defect verification; enablement lead: training and handover. Named individuals and CVs are not supplied in this fictional proposal unless stated elsewhere.

4. Commercial proposal and assumptions

Cost component	Amount (INR)
Discovery and prototype	■3,00,000
Core implementation	■14,00,000
Cloud and operations estimate	■2,00,000
Support estimate	■3,00,000
Indicative first-year estimate	■22,00,000

Commercial assumptions: amounts are fictional planning estimates in Indian rupees, exclusive of applicable taxes unless expressly included. Final price depends on scope confirmation, data volumes, hosting choice, integrations and acceptance criteria. The buyer should validate whether optional items and recurring cloud costs are included.

5. Security, compliance and risk controls

Mentions least-privilege access, HTTPS, secret management and audit logging. It does not identify the specific hosting controls, encryption-at-rest implementation, security test owner or incident notification window. A security appendix is referenced but not supplied.

6. Support, experience and references

Support model: Offers a 90-day stabilization period and best-effort email support thereafter. Annual support pricing is indicative; no formal SLA or weekend coverage is included.

Relevant experience: Reports three small-to-medium document workflow deployments. One anonymized case summary is included; customer references, team CVs and outcome measurements are not provided.

Evidence quality and limitations: Architecture boundaries and pilot phases are explained clearly. Commercial, performance and compliance claims vary in specificity and some supporting material is missing.

Key risks / open points: Cloud and support costs are estimates; security appendix is missing; capacity targets are absent; long-term support commitments need negotiation.

7. Clarifications requested

Before contract signature, the buyer should confirm data retention, hosting and data residency, user roles, integration endpoints, document volume, accessibility, service levels, tax treatment, acceptance criteria and ownership of custom code. Any item not explicitly committed above remains subject to clarification.

This document is synthetic test material created for an educational software project. Supplier names, prices, experience claims, timelines and references are fictional and must not be treated as real vendor claims.
